Figure 1

Note: Difference-in-differences results for treatment groups defined by increasing distance from the demolished projects. Differences are for the mean turnout in 2004 minus the mean turnout in 2000 for the treatment group minus the same difference for the control group. White circles represent the mean effect on white voters; black circles represent the mean effect on black voters. The N in each treatment group is in parentheses next to the mean effect. Vertical lines represent the 95% confidence intervals generated by bootstrapped standard errors of the difference between treatment and control.
